‡ This list is provided to serve as a general guide for plant material. Plants and use categories listed herein are not exhaustive, nor do they constitute automatic approval; all proposed plant material is subject to review by the ARC. In some cases where a broad genus or species is called out within the list, there may be multiple species or cultivars that may (or may not) be appropriate. The specific water needs and sizes of cultivars should be verified by the designer.

Site specific conditions should be taken into consideration in determining appropriate plant material. This includes, but is not limited to, sun exposure, soil conditions, slope versus flat areas, etc. The designer is ultimately responsible to be familiar with project areas and conditions, and to specify appropriate plants.

Water use is based upon Water Use Classification of Landscape Species, or WUCOLS, as determined by University of California Cooperative Extension and the California Department of Water Resources. Naples is located in WUCOLS Zone 3.

Useful information regarding plants that have invasive qualities, including a 'Watchlist' of potentially invasive plants that are new to the region or have not been sufficiently studied, can be found at the website for the California Invasive Plant Council (Cal-IPC) <http://www.cal-ipc.org/> .
