

TURF

Mowing: Mowing will be completed weekly at a height of 1.5". We will lower it from 1.5"-1 1/4" by the end of the month as turf will not be renovated in October.

Fertilizer: No applications are scheduled this month.

Herbicide: If a herbicide application is needed, homeowners and management will be notified in advance of scheduling. Hand pulling of weeds will continue during the month.

General: It is time to start preparing turf areas for annual reseeding. Irrigation should be reduced, a growth regulator applied, and lawns should be lowered to 1/2" before seeding. This process usually begins 3 - 4 weeks before seeding with perennial ryegrass.

SHRUBS

Focus Pruning: Pruning will focus on hedges blocking sidewalks, entrances to homes, and windows. Light pruning for most plants.

Replacements: Per HOA request.

General: Now is the time to remove sunburn-damaged foliage from shrubs. Heavy pruning can be done, as the weather cools, if necessary. Fertilize shrubs to help facilitate recovery. The latter part of this month is a good time to begin plant replacements or new planting projects.

TREES

Scheduled trimming: No tree trimming is scheduled this month.

HIGHLIGHTS

Notes: The latter part of September usually brings some relief from extreme high temperatures. Plants will begin to recover from summer stress. Begin planning for new landscape projects that can begin as the weather permits.
