

TURF

Mowing: Mowing will be completed at a height of 1 1/4".

Fertilizer: An application of Ammonium Sulfate will be applied in "weak" turf areas to promote the growth of Bermuda grass.

Herbicide: Not scheduled this month.

General: Turf areas will be transitioned to Bermuda by the end of the month. Expect some hot spots during this transition. Spray nutsedge and broadleaf weeds as they appear.

SHRUBS

Focus Pruning: Light pruning will be done to Carissas, Xylosmas, Lygustrums, Bougainvilleas, hedges, and vines.

Replacements: Will be done per HOA approval.

General: Limit pruning on heat sensitive plants. If plants get sunburned do not remove damaged foliage or risk creating more damage.

TREES

Scheduled Pruning: Palms are scheduled for pruning June 22 through June 26.

HIGHLIGHTS

Notes: June typically begins the summer season with the possibility of extreme temperatures. Irrigation requirements may change significantly this month. Monitor current forecast and make changes as necessary.
